

1. At a basketball game, 910 people were present. Only 410 were for the home team. How many were for the visitors?
2. If 657 people go to another high school basketball game, and 434 of them have season tickets, how many paid to get in?
3. The sectional tourney draws more fans than any other group of games. At one tourney game, 11,610 people attended. Of those, 3,403 were high school students. The rest were adults and children. How many were not high school students?
